Our Services:

From system design, ... to commissioning.

Company Background:

Renewable Energy Group Limited is a consulting & engineering company established in Hong Kong since 2001. We offer turnkey solutions in all aspects of renewable energy systems for commercial, industrial, and residential projects.

Our team is proud of applying extensive renewable energy project experiences into practical solutions in cost effective manners. Our strengths are based not only in our proven track records, but a wide spectrum of knowledge and expertise in various disciplines that are complimentary and to support our company growth. Our team is capable to blend different expertise into productivity.

Company Mission Statement:

Renewable Energy Group Limited is committed to the development, and promotion of green energy technologies to support a greener and cleaner environment on Earth.

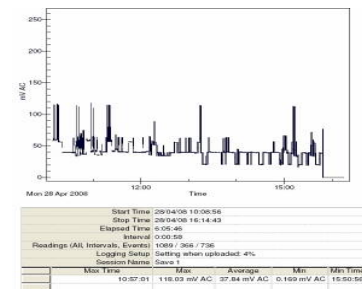

Benefits of Renewable Energy:

1. Green & clean energy.
2. To make our Earth cleaner.
3. Environmentally friendly.
4. Sustainable growth for the future.
5. To reduce fossil fuel demands.
6. To enhance green-image marketing.
7. To reduce 'Green House' emissions.

Our Expertise in Renewable Energy Technologies:

- 1) Photovoltaics(PV) – Grid connected or stand-alone Systems.
- 2) Building-Integrated Photovoltaics(BIPV) Systems.
- 3) Solar Thermal for Hot Water or Cooling Systems.
- 4) Heat Pump Systems for Hot Water.
- 5) Wind Energy Systems for Electricity.
- 6) LED lighting Systems for outdoor and indoor.
- 7) Environmental Protection, and Energy Efficiency Data Analysis.
- 8) Real-time monitoring & control for smart metering systems.

Our Team:

Our team specialised in design, supply, installation and commissioning of renewable energy systems such as photovoltaic for electricity, wind energy, solar thermal for cooling and heating, heat pump, and LED lighting systems. We are experienced in renewable energy project installations with the latest computer technology in real-time monitoring, control, and smart metering systems to implement advanced technology projects with positive results.

View and log real-time operations simultaneously.

Making correct and decisive moves under every situation.

- Different model could be combined on different phases:
- one main strong phase,
- Two smaller one threephased for motors application (a.c., pumps ect.)

House with Energy Autonomy and EMS (Energy Management System)
